# SONICLEAR™

## BEARING EDGE

The **SONIClear™ Bearing Edge** is standard on all Mapex shells and allows the drumhead to sit flatter and make better contact with the shell. The result is a stronger and deeper fundamental pitch, effortless and consistent tuning, and a significantly expanded tuning range. For the serious player, the increased head to edge contact increases shell vibration, allowing the sonic nuances of the Hybrid shell to stand out.

# SONICLEAR™ EDGE AUDIO TEST SESSIONS

## SOUND

The increased drumhead to shell contact achieved by the SONIClear™ Edge enhances shell vibration, resulting in the "biggest" sound possible from the drum.

**Oscilloscope Example:** The green waveform is a recording of a drum with the SONIClear™ edge. The dark grey waveform is a drum with a typical edge. Tuned to the same pitch and recorded identically, it's clear that the drum with the SONIClear™ Edge produces a much larger waveform from the initial strike through the full sustain of the note.

## SUSTAIN

Because the drumhead sits flat on the SONIClear™ Edge, the tension applied during tuning is more balanced and stress-free. This allows the drumhead to vibrate freely and fully.

**Waveform Comparison Example:** The green waveform is a recording of a drum with the SONIClear™ edge. The dark grey waveform is a drum with a typical edge. The size of the SONIClear™ waveform indicates a lower and stronger fundamental pitch while the length indicates a longer sustain compared to a typical edge.
